Beth,

There is a note at the bottom of the sheet in largish letters, "Note – Pavement taper restricted by existing right of way." Is something more needed?

With 11' added pavement width and 35 MPH speed limit ($11 \times 35 = 385$) the taper length should be 385'. In our diagram (using LOJIC data, not a survey) with the pavement shown 2' off the existing right of way pinch point, the taper distance achieved is 284'. Also, looking at aerial views, I now see there is an existing MSD manhole and utility pole in the vicinity of the R/W pinch point which could also be a problem.

Kind regards,

Kathy Linares, ASLA, PLA, AICP

Kathy,

Can you please note on the plan that the taper is short X' (22'?) and limited by the existing right-of-way?

Dante and Beth,
Here is an exhibit showing the improvements proposed.

From Page 11

Analysis for when the intersection of Thixton Lane at Old Bardstown Road will reach level of service F was completed. The Cooper Chapel Road extension to Bardstown Road is expected to be completed in 2028. 2029 was selected for the analysis year providing time to have the road open to traffic. Construction is expected to start at Thixton Lane and progress to the north along Street B. **110** single-family detached units can be occupied in 2029 before Level of Service F is reached. The volumes and capacity analysis are in the appendix on pages 65-67.

Diane,

Do you have a number of lots before the Thixton/Bardstown intersection fails?

Kathy,

I think that any off-site improvements need to be a binding element with a time frame.

Dante,

FYI - We are working on a separate exhibit to address the road improvement. The improvements will not extend to the site's frontage on Thixton Lane. Beth indicated that the proposed turn lane between Bardstown and Old Bardstown Road needs to be 11' wide. We will include space for one vehicle on the west side of the intersection of Old Bardstown Rd and Thixton Lane before tapering the added pavement back to existing. The taper will be limited by the existing right of way width. The length will ideally be at 35:1 but Beth has indicated that if not possible then the taper will be limited by what can be provided within the existing right of way. Working on exhibit now. Let me know if you think we need to add a note on the plan.

Beth,

David tells me that since KYTC can't decide what they want, you all/MPW are asking for a right turn lane be added on the south side of Thixton Lane between Bardstown Road and Old Bardstown Road, and to provide a 35:1 taper from Old Bardstown Road and westward along Thixton Lane. Per the below and the attached deed that indicates that some 200+ feet west of the Old Bardstown Road intersection with Thixton Lane there is only 40' or so of right of way, 20' from the centerline of Thixton Lane on the south side. Depending on the width of the required turning lane and the posted speed for this roadway the transition will be 350-420' long (plus one car length at intersection??). There does not seem to be enough existing right of way. Please call me to discuss. Thank you!
