RE: Ground Penetrating Radar (GPR) Survey performed at 11801 Orell Ave.

Mr. Smith:

To address the concern that was expressed about the possible presence of unmarked graves on the abovementioned property, Micro-Analytics coordinated with Pinpoint Utility Inspection Services to conduct a GPR survey of the area of concern.

GPR utilizes radar pulses to image the subsurface. GPR transmitter and antenna emits electromagnetic energy into the ground. When the energy encounters a buried object or a boundary between materials having different permittivity's, it may be reflected or refracted or scattered back to the surface. A receiving antenna can then record the variations in the return signal.

This GPR survey **did not indicate** the presence of any graves within the area surveyed.

If you have any further questions, please give me a call at (502) 964-8737.

Sincerely,  
Micro-Analytics, Inc.
